- 450 lb capacity
- One-piece out-of-box format

PRODUCT DETAILS

Positioning and folding functions

Trendelenburg and reverse Trendelenburg provide opposite directions of bed tilt. The frame folds to a listed width of 13.5 inches, a useful measurement when planning storage space.

Allow for the complete bed setup

The 450lb capacity includes the user and devices on the bed surface. The listed deck-height range excludes the mattress, and the 180lb bed weight excludes rails. Keep those qualifications when planning handling, mattress selection and the final bed configuration.
